EXPERIENCE

LiveStack, San Francisco, CA – Software Engineer Intern

JULY 2020 - AUG 2020

- ❑ Refactored codebase for an event hosting app with React and Formik to redesign event creation flow to use a multi-step form.
- ❑ Wrote additional form validation on the frontend using Yup schema validator and updated backend tests run using Jest.
- ❑ Created an axios request in Node.js to scrape users' Twitter and Instagram accounts for their full names.
- ❑ Updated and migrated the Postgres database to add a column for a creator's full name and modified the backend queries using Express.js.

Forkable, San Francisco, CA – Operations Manager

JULY 2019 - MAY 2020

OTHER POSITIONS HELD: *Associate General Manager of Silicon Valley*

- ❑ Managed dispatch and routing for restaurant pickups and office deliveries, overseeing over 3,000 meals and 60 drivers daily.
- ❑ Promoted within a 6-month timeframe to an expanded role encompassing special projects across Bay Area markets.
- ❑ Handled all restaurant relations in Silicon Valley; spearheaded project to improve vegan/vegetarian optionality throughout Bay Area markets.
- ❑ Launched and owned initiative to convert nearly 200 restaurant partners to use certified compostable packaging for takeout orders.

The Harry Banana, San Francisco, CA – Owner and Operator

SEPT 2018 - PRESENT

- ❑ Founded my own part-time small food business, selling raw vegan treats from a mobile food unit on weekends.
- ❑ Manage business operations, including finances and accounting, permitting, social media and sourcing compostable packaging.
- ❑ Develop and prepare original recipes, source organic ingredients, and ensure products adhere to food safety regulations.

PROJECTS

Warbler – a Twitter clone built with Python, Flask, and PostgreSQL.

[Demo](#) | [Github](#)

Microblog – a blogging app with ability to add, remove, edit as well as up- and down-vote blog posts. Built with React and Redux. [Github](#)

Job.ly – a job posting and application site built using React on the frontend, Express and PostgreSQL on the backend. [Github](#)
